

QARAR AI - Healthcare Market Statistics 2026

Synthetic market intelligence dataset for testing and demonstration only.

Summary of healthcare capacity in Syria (synthetic dataset):

Aleppo: 18 public hospitals; 6 specialized clinics; 3 private hospitals.

Damascus: 42 public hospitals; 14 specialized clinics; 11 private hospitals.

Latakia: 16 public hospitals; 5 specialized clinics; 4 private hospitals.

Diagnostic imaging capacity:

Aleppo: 3 MRI units, 5 CT units, 2 pediatric imaging centers.

Damascus: 8 MRI units, 12 CT units, 3 pediatric imaging centers.

Latakia: 4 MRI units, 6 CT units, 2 pediatric imaging centers.

Key QARAR observation:

Northern districts in Aleppo show lower access to MRI and CT services compared to central districts.

The density of specialty care is highest in central Aleppo, while northern districts report limited access to advanced services.

Market implication:

A new diagnostic imaging center in northern Aleppo may be attractive if placed near a dense residential area with high demand.

Healthcare Capacity by City

City	Public Hospitals	Specialized Clinics	Private Hospitals	MRI Units	CT Units
Aleppo	18	6	3	3	5
Damascus	42	14	11	8	12
Latakia	16	5	4	4	6
